Notice of Study Commencement

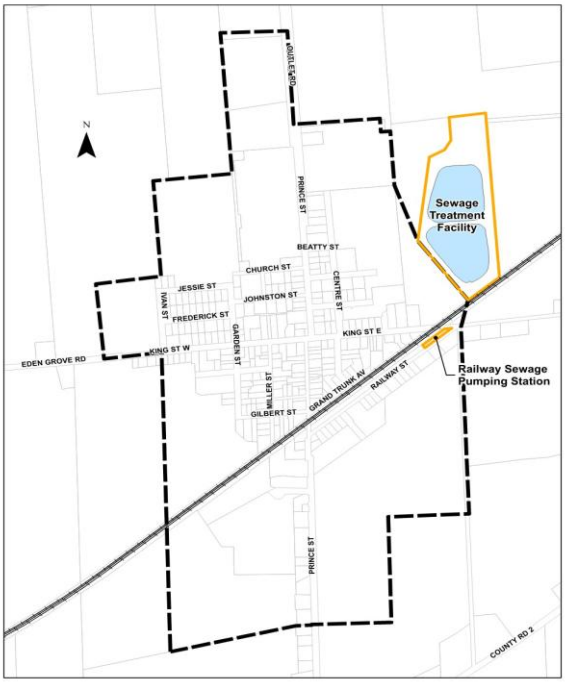
Township of Leeds and the Thousand Islands
Village of Lansdowne Sewage Treatment System (Schedule 'C') and Railway Sewage Pumping Station (Schedule 'B')
Class Environmental Assessments

The Township of Leeds and the Thousand Islands (TLTI) has initiated Class Environmental Assessments (Class EAs) to determine the preferred approach for expanding the rated capacity of the Lansdowne Sewage Treatment System (STS) and the Railway Sewage Pumping Station (SPS) to effectively collect and treat wastewater generated from existing and projected future development.

How Will This Affect Me?

The study is being undertaken following the completion of the TLTI's Water Storage Class EA. The study will assess current & future requirements of the Lansdowne STS and the Railway SPS and make recommendations for upgrading and/or expanding the system to meet TLTI's needs, including developing a preferred solution for the Railway SPS and a preferred solution and design concept for the STS.

Public, agency and indigenous consultation is a key element of the Class EA process. Based on your input, alternative solutions and design concepts will be developed, and a methodology to evaluate the different alternatives (based on different technical, environmental, economic and communal criteria) will be established.



How Do I Get More Information?

Two (2) Public Information Centres (PICs) are proposed during the study. PIC No. 1 is intended to be undertaken during Fall 2026, prior to finalizing the preferred solution. In the meantime, the study team will be reviewing and compiling background information (Phase 1 of study) and identifying alternative solutions to meet system requirements. Updates will be provided throughout the study on TLTI's website. If you have any questions regarding the study, please visit the website at https://www.leeds1000islands.ca/township-government/public-notices/. You are also invited to contact a member of the study team at anytime with questions or to provide input into the study.
